COMP 395 Final Project Group Effort

Sarah:

Sarah contributed to starting the server, doing the front-end (making the login, register, homepage, patients page), creating register and login, making the actual physical tables on the homepage.

Leopold:

Leo contributed to the MySQL databases, creating reserve and cancel endpoints, adding the necessary hashmaps, tables, BCrypt for login/register, added token authentication

There were many bugs, and we spent many hours figuring them out.

We both equally contributed to everything in the UserController and helped to fix each other's bugs. There was a lot of group work done even if one person took on a certain role (like helping out with register, login, reserve, and cancel).

We also researched by using Google and Stack Overflow.
